Introduction

Microbiome

- Microbiota: the micro-organisms which live inside & on humans (Turnbaugh et al., 2007)
- Microbiome: about 10^{13} micro-organisms whose which collective genome (Gill et al., 2006)

Figure: Concept of a core human microbiome (Turnbaugh et al., 2007)

- Ribosomal RNA
- Well-known as a key to phylogeny (Olsen & Woese, 1993)

Periodontitis (Periodontal disease)

- CAL (Clinical Attachment Loss) & BL (Bone Loss) (Flemmig, 1999)
- Risk Factors (Van Dyke & Dave, 2005)
 - ① Smoking
 - ② Diabetes
 - ③ Genetic factor
 - ④ Host response

Materials

16S rRNA Sequencing

- 100 Healthy people
- 50 Chronic periodontitis – Early
- 50 Chronic periodontitis – Moderate
- 50 Chronic periodontitis – Severe

Methods

◀ ◻ ▶ ◀ ◻ ▶ ◀ ≡ ▶ ◀ ≡ ▶ ≡ ↺ 🔍 ↻

Denoising techniques

- DADA2: Amplicon Sequence Variants (ASVs) (Callahan et al., 2016)
- Deblur: Operational Taxonomic Units (OTUs) (Amir et al., 2017)

Figure: Denoising Techniques

Taxonomy Classification

- Greengenes (GG) (DeSantis et al., 2006)
- SILVA (Pruesse et al., 2007)

Figure: Taxonomy Classification

“A **higher** performance at taxonomic levels above *genus* level; but performance appears to drop at *species* level” (Gihawi et al., 2019)

Merging Denosing and Taxonomy Classification

Merging multiple IDs (ASVs and OTUs) into one, which have:

- Different IDs.
- Identified as same taxonomy.

Figure: Example Diagram for Merging Denosing and Taxonomy Classification

- a statistical method of estimating the number of species expected in a random sample which taken from a collection (James & Rathbun, 1981)
- allows comparisons of the species richness among communities
- a good choice for normalization (Weiss et al., 2017)

Alpha- & Beta-diversity

- alpha-diversity: the richness of taxa at a single community
- beta-diversity: the taxonomic differentiation between communities

- Shannon's diversity index: a quantitative measure of community richness
- Observed Features: a qualitative measure of community richness
- Faith's Phylogenetic Diversity: a qualitative measure of community richness which incorporates phylogenetic relationship between the features
- Evenness: a measure of community evenness

(Bolyen et al., 2019, 2018)

- Bray-Curtis distance: a quantitative measure of community dissimilarity
- Jaccard distance: a qualitative measure of community dissimilarity
- Unweighted UniFrac distance: a qualitative measure of community dissimilarity which incorporates phylogenetic relationships between the features
- Weighted UniFrac distance: a quantitative measure of community dissimilarity which incorporates phylogenetic relationship between the features

(Bolyen et al., 2019, 2018)

- Analysis of composition of microbiomes
- ANCOM can be used for analyzing the composition of microbiomes in multiple populations (Mandal et al., 2015)
- Differential abundance testing

Figure: Example ANCOM Volcano Plot (Bolyen et al., 2019, 2018)

- clr: Centered log Ratio
- W: a count of the number of sub-hypothesis which have passed for given species

- Pandas (McKinney et al., 2011)
- Scikit-learn (Pedregosa et al., 2011)
- Matplotlib (Hunter, 2007; Barrett, Hunter, Miller, Hsu, & Greenfield, 2005)
- Seaborn (Waskom & the seaborn development team, 2020)

- t-distributed stochastic neighbor embedding
- reveals high-dimensional data a location in two-dimensional map (Maaten & Hinton, 2008)

Figure: Visualization by t-SNE (Maaten & Hinton, 2008)

Results

Quality Filter

(a) Forward Reads

(b) Reverse Reads

Figure: Sequence Quality Plot

- ∴ Maximum Sequence Length $n_{forward} = 300$, $n_{reverse} = 265$
- ∴ The longest length which has sequence quality ≥ 30 at middle.

Rarefaction

(a) DADA2

(b) Deblur

Figure: Frequency per sample

\therefore p-sampling-depth $n_{DADA2} = 3786$ and $n_{Deblur} = 7253$

Alpha-diversity I

(a) Evenness ($p < 0.01$)

(b) Faith PD ($p < 10^{-6}$)

(c) Observed features ($p < 10^{-3}$)

(d) Shannon's diversity ($p > 0.05$)

Figure: Alpha Diversity from DADA2 with Kruskal-Wallis among All Groups

Alpha-diversity II

(a) Evenness ($p < 0.05$)

(b) Faith PD ($p < 10^{-18}$)

(c) Observed features ($p < 10^{-12}$)

(d) Shannon's diversity ($p < 10^{-4}$)

Figure: Alpha Diversity from Deblur with Kruskal-Wallis among All Groups

Beta-diversity I

Figure: Bray-Curtis Distance with DADA2

Beta-diversity II

Figure: Jaccard Distance with DADA2

Beta-diversity III

Figure: Unweighted Unifrac Distance with DADA2

Beta-diversity IV

Figure: Weighted Unifrac Distance with DADA2

Beta-diversity V

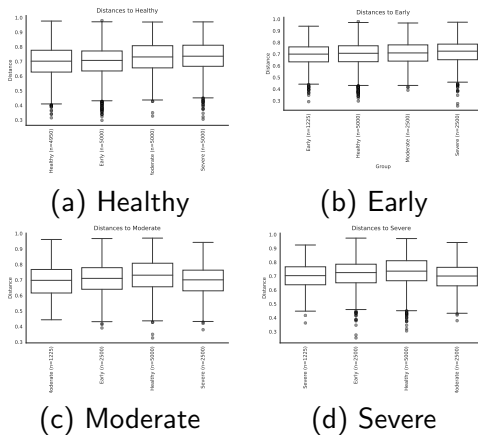

Figure: Bray-Curtis Distance with Deblur

Beta-diversity VI

Figure: Jaccard Distance with Deblur

Beta-diversity VII

Figure: Unweighted Unifrac Distance with Deblur

Beta-diversity VIII

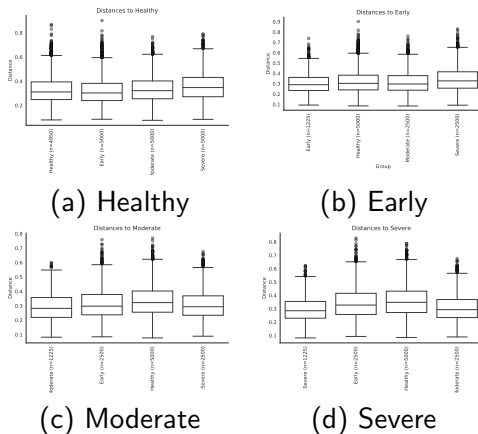

Figure: Weighted Unifrac Distance with Deblur

(a) Greengenes

(b) SILVA

Figure: ANCOM Volcano Plot with DADA2

(a) Greengenes

(b) SILVA

Figure: ANCOM Volcano Plot with Deblur

t-SNE with Whole Microbiome I

(a) Greengenes (328 Taxa)

(b) SILVA (633 Taxa)

Figure: t-SNE Plot with Whole Microbiome from DADA2

t-SNE with Whole Microbiome II

(a) Greengenes (232 Taxa)

(b) SILVA (414 Taxa)

Figure: t-SNE Plot with Whole Microbiome from Deblur

t-SNE with ANCOM Selected I

(a) Greengenes (15 Taxa)

(b) SILVA (23 Taxa)

Figure: t-SNE Plot with ANCOM Selected from DADA2

t-SNE with ANCOM Selected II

(a) Greengenes (27 Taxa)

(b) SILVA (20 Taxa)

Figure: t-SNE Plot with ANCOM Selected from Deblur

Discussion
