#### Periodontitis

Seunghoon Kim Jaewoong Lee Semin Lee

Ulsan National Institute of Science and Technology jwlee230@unist.ac.kr

2020-12-07

### Overview

- Introduction
- 2 Materials
- Methods
- Results
- 5 Discussion References

# Introduction

#### Microbiome

- Microbiota: the micro-organisms which live inside & on humans (Turnbaugh et al., 2007)
- Microbiome: about  $10^{13}$  micro-organisms whose which collective genome (Gill et al., 2006)

Figure: Concept of a core human microbiome (Turnbaugh et al., 2007)

#### rRNA

- Ribosomal RNA
- Well-known as a key to phylogeny (Olsen & Woese, 1993)

# Periodontitis (Periodontal disease)

- CAL (Clinical Attachment Loss) & BL (Bone Loss) (Flemmig, 1999)
- Risk Factors (Van Dyke & Dave, 2005)
  - Smoking
  - 2 Diabetes
  - Genetic factor
  - 4 Host response

### Materials

# 16S rRNA Sequencing

- 100 Healthy people
- 50 Chronic periodontitis Early
- 50 Chronic periodontitis Moderate
- 50 Chronic periodontitis Severe

# Methods

# QIIME2 Workflow

Figure: QIIME2 Workflow (Bolyen et al., 2019, 2018)

### Denoising techniques

- DADA2: Amplicon Sequence Variants (ASVs) (Callahan et al., 2016)
- Deblur: Operational Taxonomic Units (OTUs) (Amir et al., 2017)

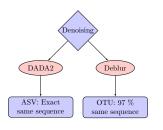

Figure: Denoising Techniques

# Taxonomy Classification

- Greengenes (GG) (DeSantis et al., 2006)
- SILVA (Pruesse et al., 2007)

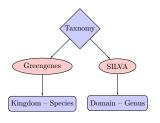

Figure: Taxonomy Classification

"A **higher** performance at taxonomic levels above *genus* level; but performance appears to drop at *species* level" (Gihawi et al., 2019)

# Merging Denosing and Taxonomy Classification

Merging multiple IDs (ASVs and OTUs) into one, which have:

- Different IDs.
- Identified as same taxonomy.

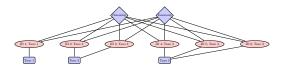

Figure: Example Diagram for Merging Denosing and Taxonomy Classification

#### Rarefaction

- a statistical method of estimating the number of species expected in a random sample which taken from a collection (James & Rathbun, 1981)
- allows comparisons of the species richness among communities
- a good choice for normalization (Weiss et al., 2017)

### Alpha- & Beta-diversity

- alpha-diversity: the richness of taxa at a single community
- beta-diversity: the taxonomic differentiation between communities

# Alpha-diversity

- Shannon's diversity index: a quantitative measure of community richness
- Observed Features: a qualitative measure of community richness
- Faith's Phylogenetic Diversity: a qualitative measure of community richness which incorporates phylogenetic relationship between the features
- Evenness: a measure of community evenness

(Bolyen et al., 2019, 2018)

### Beta-diversity

- Bray-Curtis distance: a quantitative measure of community dissimilarity
- Jaccard distance: a qualitative measure of community dissimilarity
- Unweighted UniFrac distance: a qualitative measure of community dissimilarity which incorporates phylogenetic relationships between the features
- Weighted UniFrac distance: a quantitative measure of community dissimilarity which incorporates phylogenetic relationship between the features

(Bolyen et al., 2019, 2018)

#### **ANCOM**

- Analysis of composition of microbiomes
- ANCOM can be used for analyzing the composition of microbiomes in multiple populations (Mandal et al., 2015)
- Differential abundance testing

Figure: Example ANCOM Volcano Plot (Bolyen et al., 2019, 2018)

- clr: Centered log Ratio
- W: a count of the number of sub-hypothesis which have passed for given species

# Python Packages

- Pandas (McKinney et al., 2011)
- Scikit-learn (Pedregosa et al., 2011)
- Matplotlib (Hunter, 2007; Barrett, Hunter, Miller, Hsu, & Greenfield, 2005)
- Seaborn (Waskom & the seaborn development team, 2020)

#### t-SNE

- t-distributed stochastic neighbor embedding
- reveals high-dimensional data a location in two-dimensional map (Maaten & Hinton, 2008)

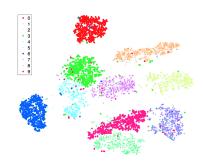

Figure: Visualization by t-SNE (Maaten & Hinton, 2008)

#### Classification I

Figure: Workflow of Classification

#### Classification Metrics:

- Accuracy
- Balanced Accuracy
- Sensitivity
- Specificity
- Precision

#### Classification II

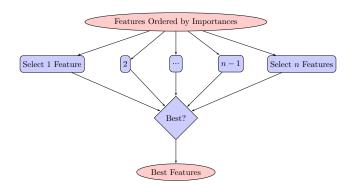

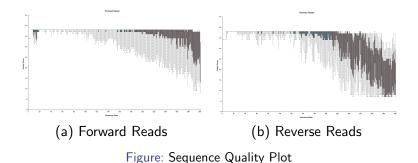

Figure: Deciding the Best Features

### Results

# **Quality Filter**

- $\therefore$  Maximum Sequence Length  $n_{forword} = 300$ ,  $n_{reverse} = 265$
- $\therefore$  The longest length which has sequence quality  $\geq$  30 at middle.

#### Rarefaction

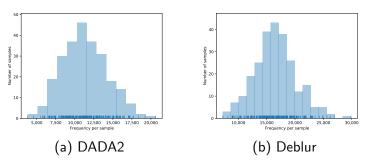

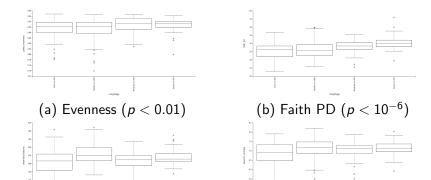

Figure: Frequency per sample

 $\therefore$  p-sampling-depth  $n_{DADA2} = 3786$  and  $n_{Deblur} = 7253$ 

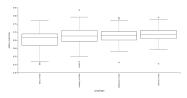

# Alpha-diversity I

(c) Observed features ( $p < 10^{-3}$ ) (d) Shannon's diversity (p > 0.05)

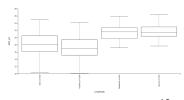

Figure: Alpha Diversity from DADA2 with Kruskal-Wallis among All Groups

# Alpha-diversity II

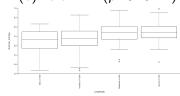

(a) Evenness (p < 0.05)

- (c) Observed features ( $p < 10^{-12}$ ) (d) Shannon's diversity ( $p < 10^{-4}$ )

Figure: Alpha Diversity from Deblur with Kruskal-Wallis among All Groups

### Beta-diversity I

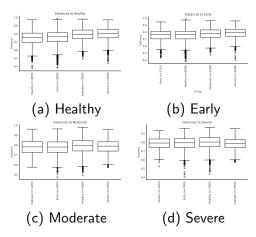

Figure: Bray-Curtis Distance with DADA2

# Beta-diversity II

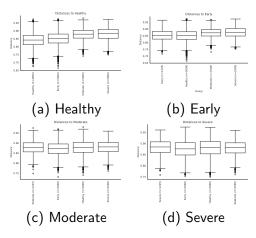

Figure: Jaccard Distance with DADA2

# Beta-diversity III

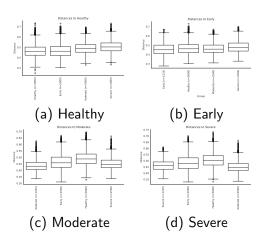

Figure: Unweighted Unifrac Distance with DADA2

# Beta-diversity IV

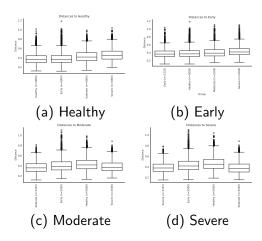

Figure: Weighted Unifrac Distance with DADA2

# Beta-diversity V

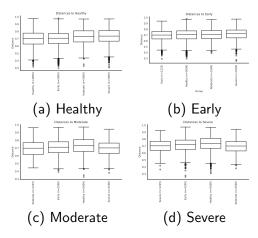

Figure: Bray-Curtis Distance with Deblur

### Beta-diversity VI

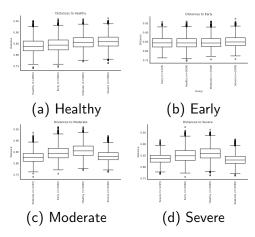

Figure: Jaccard Distance with Deblur

# Beta-diversity VII

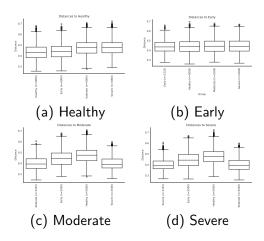

Figure: Unweighted Unifrac Distance with Deblur

# Beta-diversity VIII

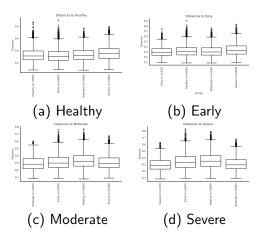

Figure: Weighted Unifrac Distance with Deblur

### ANCOM I

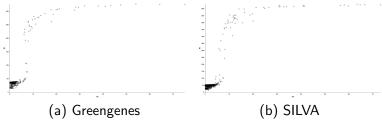

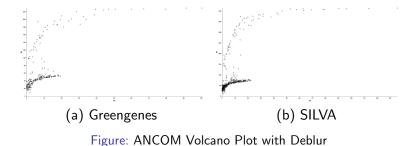

Figure: ANCOM Volcano Plot with DADA2

## **ANCOM II**

#### t-SNE with Whole Microbiome I

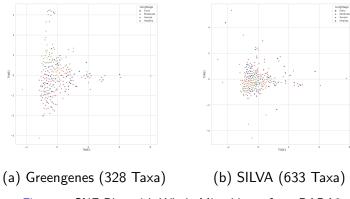

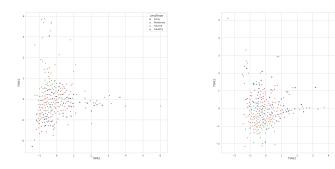

Figure: t-SNE Plot with Whole Microbiome from DADA2

#### t-SNE with Whole Microbiome II

(a) Greengenes (232 Taxa)

(b) SILVA (414 Taxa)

Figure: t-SNE Plot with Whole Microbiome from Deblur

#### t-SNE with ANCOM Selected I

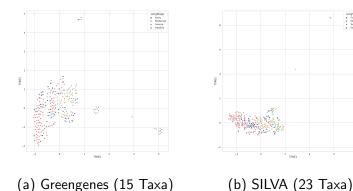

Figure: t-SNE Plot with ANCOM Selected from DADA2

#### t-SNE with ANCOM Selected II

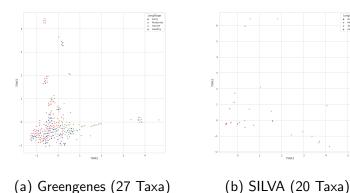

Figure: t-SNE Plot with ANCOM Selected from Deblur

#### RandomForest Classifier I

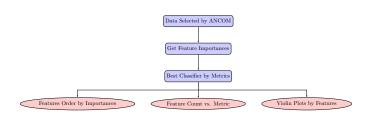

Figure: RandomForest Classifier Workflow

**DADA2** + **SILVA** gives the best result with many metrics.

#### RandomForest Classifier II

#### Table: Features Order by Importances

Order	Taxonomy (Genus [Species])
1	Actinomyces
2	Actinomyces Schaalia-odontolytica
3	Prevotella Prevotella-intermedia
4	Filifactor Filifactor-alocis
5	Oribacterium
6	Tannerella Tannerella-forsythia

#### RandomForest Classifier III

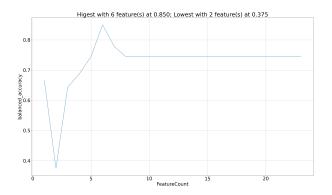

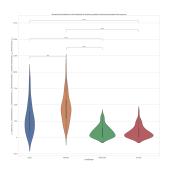

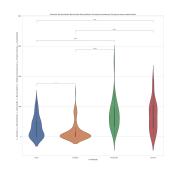

Figure: Balanced Accuracy by Feature Count

### RandomForest Classifier IV

(a) Actinomyces

(b) Actinomyces Schaalia-odontolytica

Figure: Violin Plot by Features

### RandomForest Classifier V

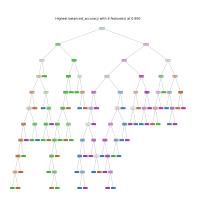

Figure: RandomForest Tree Plot

## RandomForest Classifier - Merge Healthy+Early I

# Discussion
